

# aggregate equipment

# production

Aggregate is a component of a composite material used to resist compressive stress and provide bulk to the composite material. For efficient filling, aggregate should be much smaller than the finished item, but have a wide variety of sizes.

It is vastly used in most combination of construction material such as concrete and asphalt technology to which aggregates may either be specified or designed to suit a particular engineering requirement while not suiting another.

The properties of aggregates can vary and hence affect the final construction material.

Therefore it is important to test the different parameters such as resistance to polishing, particle size, shape and texture, relative, bulk density, crushing value, impact value, organic impurities, compacted densities, specific gravity, soundness and abrasion resistance.

# Geotechnical Testing Equipment

## Flakiness Sieves

Standards: BS 812

Flakiness Sieves are used to determine particle size shape or geometrical characteristics of the aggregates.

Each sieve made from heavy gauge steel sheets in dimensions specified in the standards and coated with electrostatic paint.

Product Code	Slot Size
<b>AG 0101</b>	4,9 mm slot size
<b>AG 0102</b>	7.2 mm slot size
<b>AG 0103</b>	10.2 mm slot size
<b>AG 0104</b>	14.4 mm slot size
<b>AG 0105</b>	19.7 mm slot size
<b>AG 0106</b>	26.3 mm slot size
<b>AG 0107</b>	33.9 mm slot size

## Grid Sieves

Standards: EN 933-1, EN 933-3

Grid Sieves are used to determine the flakiness index of the aggregates.

Made of electrostatic steel frame and 5 mm diameter stainless steel parallel bars.

Product Code	Aperture (mm)
<b>AG 0108</b>	2,5 mm
<b>AG 0109</b>	3.15 mm
<b>AG 0110</b>	4 mm
<b>AG 0111</b>	5 mm
<b>AG 0112</b>	6.30 mm
<b>AG 0113</b>	8 mm
<b>AG 0114</b>	10 mm
<b>AG 0115</b>	12.5 mm
<b>AG 0116</b>	16 mm
<b>AG 0117</b>	20 mm
<b>AG 0118</b>	25 mm
<b>AG 0119</b>	31.5 mm
<b>AG 0120</b>	40 mm

## Flakiness Gauge

Standards: BS 812

Flakiness Gauge is used to determine if aggregate particles are to be considered flaky, i.e. their thickness is less than 0.6 of their nominal size.

### **AG 0121**

Flakiness Gauge

Length Gauge classifies aggregate elongation by measuring the length of individual particles.

Aggregate particles are considered elongated when their length is more than 1.8 of their nominal size.

Length Gauge test is not applicable to material retained on 63.0 mm BS test sieve.

### **AG 0122**

Length Gauge

## Shape Index Gauge

**Standards: EN 933-4**

Shape Index Gauge is used to determine the shape factor of individual aggregates by comparing the ration of length to width.

**AG 0123**  
Shape Index Gauge

## Particle Density (specific gravity) and Water Absorption Sand Absorption Cone and Tamping Rod

**Standards: EN 1097-6, 12697-6, BS 812, ASTM C127-C128, AASHTO T85, T84**

The Sand Absorption Cone and Tamping Rod are used to determine the specific gravity and absorption of fine aggregates smaller than 20 mm.

The Apparatus is manufactured from plated steel for protection against corrosion.

**AG 0124**  
Sand Absorption Cone and Tamping Rod complete set

**Spares:**  
**AG 0125**  
Sand Absorption Cone  
**AG 0126**  
Tamping Rod

## Specific Gravity Frame and Buoyancy Balance

**Standards: BS 812, ASTM C127, AASHTO T85 BS 812, ASTM C127 AASHTO T85 EN 1097-6, 12697-6, EN 12390-7 EN 1097-6, 12697-6, EN 12390-7**

This method is used to determine the aggregates specific gravity. The robust frame is designed to support the buoyancy balance.

The lower part of the frame incorporates a moving platform, which carries the water tank allowing the test specimens to be weighed in both air and water.

**AG 0127**  
Specific Gravity Frame supplied complete with water tank, Buoyancy Balance, Wire Basket and suspension hook

**Spares:**  
**AG 0128**  
Wire Basket and suspension hook  
**AG 0129**  
Water Tank  
**AG 0130**  
Buoyancy Balance, 6000 g x 0.1 g

## Bulk Density Measures

Standards: BS 812-2, 3797, EN 1097-3, 12350-6, ASTM C138, C29

The Bulk Density Measures are used to determine the loose bulk density and voids of aggregates.

They are made from heavy steel gauge and specially coated against corrosion.

Product Code	Capacity Model
<b>AG 0131</b>	3 ltr
<b>AG 0132</b>	7 ltr
<b>AG 0133</b>	10 ltr
<b>AG 0134</b>	15 ltr
<b>AG 0135</b>	20 ltr
<b>AG 0136</b>	30 ltr

## Chloride and Sulphate Content, Instant Test Strips

Quantab chloride titrators can be used for estimating the chloride content of aqueous solutions. They are suitable for site testing and quality control of aggregates requiring less than 30 minutes to obtain a result.

### AG 0137

Quantab Chloride Titrator Strips. Type 1175 titration range 0.005% to 0.1% (30 to 600 ppm) NaCl. Pack of 50.

### AG 0138

Quantab Chloride Titrator Strips. Type 1176 titration range 0.05%

to 1% (300 to 6000 ppm) NaCl. Pack of 40.

A qualitative or semi-quantitative test is recommended for determining sulphate ions in aqueous solutions. Sulphate test strips are convenient measuring devices for preliminary assessment of sulphate content.

### AG 0139

Sulphate Test Strips detection range 200 to 900 mg/l. Pack of 100.

## Organic Impurities in Fine Aggregate

If aggregate contains organic impurities it may not be suitable for inclusion in concrete.

Organic impurities, usually tannic acid and its derivatives, may interfere with the chemical reactions of hydration.

Impurities are more likely to be found in fine (sand) aggregate.

### AG 0140

Organic Impurities complete Test Set, containing Graduated Bottle, Reference Color Comparison Chart and Sodium Hydroxide solution

### AG 0141

Graduated Bottle, 300 ml

### AG 0142

Reference Color Comparison Chart

### AG 0143

## Aggregate Crushing Value and Ten Percent Fines Value (ACV / TFV)

**Standards: 812-110, 111**

Aggregate crushing Value provides a relative measure of the resistance of an aggregate to crushing under a gradually applied compressive load.

Ten Percent Fines Value used for testing aggregate smaller than 10 mm.

**Comprises:**

150 mm or 75mm diameter steel cylinder, plunger, base plate, tamping rod and metal measure. All parts are powder coated or galvanized.

Product Code	Description
<b>AG 0144</b>	Aggregate Crushing Value Apparatus 150 mm dia.
<b>AG 0145</b>	Metal Measure 115 mm diameter x 180 mm deep
<b>For Aggregates Smaller Than 10 mm</b>	
<b>AG 0146</b>	Aggregate Crushing Value Apparatus, 75 mm dia.
<b>AG 0147</b>	Metal Measure 57 mm diameter x 90 mm deep.
<b>Accessories:</b>	
<b>AG 0148</b>	Tamping Rod 8 mm diameter x 300 mm long

## Aggregate Impact Value (AIV)

**Standards: 812-112**

The Aggregate Impact Value machine has been developed for determining the impact value of aggregates.

Manufactured from plated steel against corrosion, a counter fitted to the machine automatically records the number of blows delivered to the sample.

The AIV is supplied complete with 75 mm diameter x 50 mm deep .

cylindrical measure and steel tamping rod.

**AG 0149**

Aggregate Impact Value apparatus complete

## Los Angeles Abrasion Machine

**Standards: EN 1097-2, ASTM C131, C535**

Los Angeles Abrasion Machine is used for determination of aggregates resistance to fragmentation.

The machine consists of an electronic control unit and a rolled steel drum having an inside diameter of 711 mm and internal length 508 mm.

The drum is rotated at a speed of between 31 and 33 r.p.m. The internal shelf is provided with the machine is conforming to ASTM and EN standards.

The machine is equipped with automatic counter, which allows stopping when the preset number of revolutions is completed. There is a steel tray supplied with machine for easy discharge of specimen.

Safety Cabinet model are installed with electronic control unit and electric safety device which automatically stops the rotation of the drum when the door is opened, conforming to CE directives.

### **AG 0150**

Los Angeles Abrasion Machine  
220 V, 50–60 Hz

### **AG 0151**

Los Angeles Abrasion Machine with  
safety cabinet, 220 V, 50–60 Hz

### **AG 0152**

Set of 11 abrasive charges  
conforming to EN

### **AG 0153**

Set of 12 abrasive charges  
conforming to ASTM

## Abrasion Testing Machine

**Standards: EN 1341, 1342, 1343**

Abrasion Testing Machine is designed to determine the resistance to abrasion and wear of natural stones and concrete products.

The abrasion wheel is 70 mm thick and rotates with speed of 75 r.p.m. The machine is equipped with digital counter which stops the rotation at the preset number of revolutions.

### **AG 0154**

Abrasion Testing Machine

## Digital Point Load Apparatus

**Standards: EN 1997-2, ASTM D-5731**

The point load tester is used to measure rock strength in the field or laboratory.

A load frame, hydraulic jack and digital display are mounted on the base of a carrying case.

With this point load tester, samples up to 4" (101.6mm) diameter can be tested on 2 conical points.

A graduated scale indicates distance between conical points and is also used to measure specimen diameter. Applied load is digitally displayed to 0.001kN; accuracy is  $\pm 1\%$ ; range is 0 to 56kN. Display shows maximum load and will also read in lb and tons.

**AG 0155**  
Digital Point Load Apparatus

## Nordic Abrasion Machine

**Standards: EN 1097-9**

The Nordic Abrasion Machine has been developed to test the resistance to abrasion/wear from studded tires.

Test is being performed on natural stones and aggregates between 11,2 mm and 16 mm, it consists of rotating aggregates in drum with steel abrasive balls and water.

The machine consists of an electronic control unit and a rolled stainless

steel drum having an inside diameter of 206,5mm, internal length 335mm and thickness of 6mm. The drum is rotated at a speed of  $90 \pm 3$  r.p.m. 3 wings are installed inside of the drum to allow balls and aggregates to be mixed properly. The abrasion loss rate of aggregates is calculated after specified number of revolutions stated in the related standard.

**AG 0156**  
Nordic Abrasion Machine

## Accelerated Polishing Machine

**Standards: EN 1097-8, EN 1341, 1342, 1343**

The Accelerated Polishing Machine is used to measure the resistance of road stone to the polishing action of vehicle tires on a road surface. The machine consists of road wheel rotating in the speed of between 315 and 325 r.p.m.

The machine is supplied complete with road wheel, side plate, rubber rings, abrasive feed mechanism, corn emery, flour emery, set of 4 specimen mould and 2 mould plates.

**AG 0157**  
Accelerated Polishing Machine

# Geotechnical Testing Equipment

## AAV Abrasion Machine

**Standards: EN 1097-8, BS 812**

The AAV Abrasion Machine provides a measure of the resistance of aggregate to surface wear by abrasion, it consists of a flat circular cast iron grinding lap 600 mm dia which rotates in a horizontal plane at a speed of 28/30 r.p.m.

The abrasive sand is fed across the surface of the specimen samples through a special funnel. The machine is supplied complete with two specimen moulds, two trays, two flat plates, weights and clamps.

**AG 0158**  
AAV Abrasion Machine

## Micro-Deval Testing Machine

**Standards: EN 1097-1**

The Micro Deval Testing Machine used to determine the resistance of wear for 25-50mm size aggregates. The machine consists of a steel frame, four stainless steel cylinders, and 25kg of 10 mm diameter stainless steel spheres.

Fitted with an automatic digital counter that allows the machine to stop automatically at preset number of revolutions. Stainless steel Ø200 x 154 drums rotates at speed of 100 (±5) r.p.m.

**AG 0159**  
Micro-Deval Testing Machine

# Aggregate Equipment

## Skid Resistance and Friction Tester (Skid Tester)

Standards: EN 1097-8, ASTM E103, BS 812:144

The Skid Tester is used for measuring the surface friction properties, it is suitable for both site and laboratory applications and for Polished Stone Value tests using curved specimens from accelerated polishing tests.

Supplied complete with additional scale for tests on polished stone value specimens and 6 rubber sliders for site usage.

### **AG 0160**

Skid Resistance Tester complete with all accessories

### **AG 0161**

Rubber Sliders for site usage

### **AG 0162**

Clamping device for tests on natural stones

### **AG 0163**

Clamping device for polished stone value tests

### **AG 0164**

Metal base plate

## High Capacity Screen Shaker

The High Capacity Screen Shaker is ideal for sizing large quantities of crushed stones, sand, gravel, slag, coal, coke, ores, pellets and similar materials.

The screen shaker has a capacity of about 30 kg of sample. For use with 457x660x75mm dimension screens.

### **AG 0165**

High Capacity Screen Shaker

### **AG 0166**

Set of screens

## Shrinkage and Expansion of Aggregates

Standards: BS812-120, EN 1367-4

The scope of this test is the determination of the effect of aggregates on the drying shrinkage of concrete. The test is based on the testing of concretes of fixed mix proportions and aggregates of 20 mm max size.

### **AG 0167**

Three gang Prism Mould for specimens 50 x 50 x 200 mm

**Rest of the accessories are in the cement section, p.40**
